Our **Yankee Cobble**, **FineLine**, **MillStone** and **Town N' Country Pavers** create engaging patterns and designs that no other paving material can match! Choose from an array of running bonds, elegant basket weaves, herringbones ranging from simple to detailed combinations, or random patterns that reflect the individuality of the installer.

See our **Pattern Chart** for guidance in selecting patterns. Any of the patterns are suitable for walkways, patios, and pool decks. While running bonds and basket weaves may be used for residential driveways, the herringbone patterns provide the greatest degree of interlock. Stack bond patterns should only be utilized for applications limited to pedestrian traffic.

Starting Patterns – Placing stones in a pattern is like painting by numbers. Most patterns are comprised of just a small combination of stones that are repeated throughout. Once you get started, simply follow the laying order. The order of stones will help establish a sense and rhythm to whatever pattern you choose. Be sure to always start at a 90° corner or along a straight edge, even when the pavement curves, and remember to pull string lines as you progress to keep the pattern from going astray!

Random patterns, on the other hand, allow creativity in translating a design from paper to pavement. While each stone may not match the drawing exactly, an experienced craftsman can achieve the overall intent of the design.

Circles and Fans - Yankee Cobble & MillStone

Circles

Our **Circle Pak** is comprised of five shapes that can be used to create both half and full circles. Sold by the pallet, each Circle Pak can form circles as small as 6¹/₂" in diameter to as large as 108¹/₂". A second Circle Pak will expand the diameter to 159". Medium Rectangles are used to extend the diameter to 184¹/₂". For circles exceeding these dimensions, continue with Medium Rectangles or incorporate Squares. Each additional row increases the diameter approximately 12³/₄".

Start circles in the center and work your way out. Refer to the chart for the sequence in which the shapes are placed. Expand the circle one row at a time placing the stones hand-tight and joints offset from the previous row. Please note that all the joints may not be staggered from row to row.

Use *Medium Rectangle* and/or *Square* stones to expand the circle beyond the 14 rows shown in chart. Additional rows will increase the diameter in increments of approximately 12³/₄".

When including circles in a pavement, you will want to deduct the area of the circle from the overall square footage of the pavement. There's no need to dig out that old geometry book as we have included the formulas here to help with determining the area of a circle and layout.

- Area of a circle = dia² x .7854 (Ex. 8' dia. = 64 x .7854)
- Area of a circle = rad² x 3.14 (Ex. 4' rad. = 16 x 3.14)
- Circumference of a circle = diameter x 3.1416
- Diameter of a circle = circumference x .3183

Fans

Circle Paks can also be used to create fans, which impart an "old world" look and require a similar expertise when setting. We have shown a popular size that can be set within the arm's reach of the installer. Shaded areas are stones that require cutting. One Circle Pak will do five fans of this size.

LEGEND/LAYOUT KEY

- 3 pcs. - Large Wedge (LW)
- 35 pcs. - Small Wedge (SW)
- 8 pcs. - Small Rectangle (SR)
- 4 pcs. - Med. Rectangle (MR)

Shaded areas indicate cut stones

Start laying fans at a 90° angle by snapping a line where the center of the first fan will go. Using a paver square or the 3-4-5 triangle method, strike a perpendicular line to establish a square corner where the two lines intersect.
